GROVE TMS9000-2

The TMS9000-2 sets a new standard for truck mounted cranes; strong load charts, long boom and a low gross vehicle weight.

Features

MEGAFORM™ boom

The Grove MEGAFORM™ boom shape eliminates weight and increases capacity compared to conventional shapes. The simplified TWIN-LOCK™ boom pinning system automatically pins the sections in position using two horizontal large diameter pins. A single cylinder inside the boom reduces weight which has been used elsewhere to strengthen the machine.

Counterweight

Up to 22 000 kg (48,500 lb) of counterweight can be power installed and removed from the superstructure cab — allowing for easy transport to and from the job site. Wing weights are interchangeable with previous model.

Control system

Crane functions are controlled by Crane Control System (CCS). CCS offers a user-friendly interface, two full graphic displays mounted vertically for easier viewing and a jog dial for easier navigation and data input. The system allows the electronic controllers to be reprogrammed by the operator for specific speed and reaction. Parts commonality across Grove, Manitowoc and Potain product lines enhances operator familiarization and serviceability.

Outriggers

Two-stage outriggers provide four position settings - 0%, 57%, 79%, and 100%.

Optional power luffing extension

For improved up-and-over reach, a power luffing extension is available on the TMS9000-2. It is hydraulically offsettable from the superstructure cab, 0° to 45°. Additional extensions are also available including integrated heavy duty and manually offsettable options.
